Summary

Full-stack software engineer based in Metro Manila. I build production web apps end-to-end — React/Next.js on the front, Node.js and Python (FastAPI) on the back — and own the cloud infrastructure that runs them (AWS CDK, CI/CD). I've shipped systems across insurance, distribution/ERP, field-service, and public-sector domains, working closely with clients and teams in Agile.

Education

Univeristy of the Philippines Open University

Dip. Computer Science

06/2024

University of the Philippines Diliman

BS Home Economics

12/2018

Skills

- **Frontend:** React, Next.js, TypeScript, Tailwind CSS, Chakra UI, shadcn/ui — responsive, intuitive interfaces
 - **Backend:** Node.js, Python, FastAPI, REST API design, PostgreSQL, Prisma
 - **Cloud & DevOps:** Amazon Web Services (AWS), Infrastructure as Code, Docker, CI/CD with GitHub Actions
 - **Architecture:** multi-tenant systems, role-based access control, authentication & authorization, third-party integrations (OCR, PDF generation, payments, maps)
 - **Version Control:** Git, GitHub — collaborative, review-driven workflows
 - **Testing & Quality:** Vitest / Jest, manual UI & API testing
 - **Design / UX:** Figma, UI/UX handoffs with design teams
 - **AI Tooling:** Claude Code & Codex for agentic, AI-assisted development workflows
 - **Leadership & Delivery:** stakeholder consulting, tailored solution design, project & timeline management, code review & mentorship, technical documentation, Agile/Scrum
-

Experience

O-Kun Frontier Innovations Inc.

System Engineer/Web Developer

07/2024 - Present

- Built and shipped full-stack apps for 5+ clients across insurance, ERP, retail field-service, and public-sector domains — React/Next.js, FastAPI, Node.js
- Architected and provisioned AWS infrastructure as code (CDK) with GitHub Actions CI/CD
- Designed database schemas and multi-tenant, role-based architectures — an ERP (inventory/orders/accounting) and a field-service platform with per-role mobile apps
- Shipped complex integrations: OCR digitization, PDF generation, payment/autoship, mapping
- Consulted directly with stakeholders to scope requirements and design tailored solutions, managing project timelines through to delivery
- Reviewed teammates' code and authored technical documentation

Pru-Life UK

- Designed and delivered training programs and curricula for insurance products, compliance, and sales, including train-the-trainer sessions
 - Managed the Litmos LMS, collaborated with regional stakeholders, and evaluated programs to iterate on content
 - *Built deep insurance domain knowledge and strong technical documentation & communication skills that now inform my work as a developer (incl. building an insurance platform)*
-

Selected Projects

- **Membership Management Platform** — *Fraternity organization · Full-stack* — Member directory, event recording, and marketplace with a built-in CMS admin. Next.js, Payload CMS, FastAPI, PostgreSQL, AWS.
- **Public Auction Notice Portal** — *Legal / public-notice · Full-stack* — Digitizes court-issued property-auction notices via OCR and publishes them in a searchable public portal. Next.js, Prisma, PostgreSQL, AWS.
- **Inventory & Order Management System (ERP)** — *Veterinary distribution · Full-stack* — Multi-company inventory, purchase & sales orders, and accounting (expenses, cash flow) with PDF document generation. Next.js, Chakra UI, AWS.
- **Repairs & Maintenance System** — *Retail (milk tea chain) · Full-stack* — Role-based equipment ticketing, technician scheduling and store visits, and service reports; desktop admin console plus dedicated mobile apps per role. Next.js, Prisma, PostgreSQL, AWS.
- **Insurance Sales & Management Platform** — *Insurance (Japan) · Frontend* — Customers buy and manage policies; agents handle sales and recruit sub-agents; multi-brand. Next.js, Chakra UI.
